Passionate software engineer with 5+ years of experience building scalable web applications. Specialized in React, Node.js, and cloud architecture. Love solving complex problems and mentoring junior developers.

EDUCATION

University of California, Berkeley

Bachelor of Science in Computer Science · 3.8

Sep 2014 – May 2018

PUBLICATIONS

Scaling Microservices Without Losing Your Mind. *ACM Queue*. (2023-04-01)

A practical guide to incremental monolith decomposition and service-boundary design.

Accessible Component Patterns for React. *Smashing Magazine*. (2022-09-15)

Patterns for building WCAG-compliant component libraries.

CERTIFICATES

AWS Certified Solutions Architect – Professional

Amazon Web Services

2023-02-01

Certified Kubernetes Administrator (CKA)

Cloud Native Computing Foundation

2022-05-01

Thomas Davis

Web Developer

Welbourne,

About me

I'm a full stack web developer who can build apps from the ground up. I've worked mostly at startups so I am used to wearing many hats. I am a very product focused developer who prioritizes user feedback first and foremost. I'm generally very flexible when investigating new roles.

Experience

Misc Companies Product Engineer 2020 - Present Over the past several years, I've worked at various roles and companies. Mostly early stage startups, doing full stack product development.
Tokenized Senior Javascript Developer 2020 - 2021 Tokenized is a Bitcoin wallet for issuing, managing and trading digital tokens. I built out the front end which was packaged as an electron app. It was a difficult frontend to build because we store the users keys locally and used them to sign transactions and contracts.
Blockbid Senior Javascript Developer 2018 - 2020 Blockbid is an Australian crypto currency exchange. I started off on the frontend but eventually became lead tech and worked on every moving piece of the exchange. I really enjoyed working with liquidity providers and connecting their platforms to help us achieve liquid markets.
Listium Developer 2016 - 2018 Built a very large and complex React / Redux application. It works on all platforms and has iOS/Android builds due to it being a PWA. (wrapped it in React Native though only implementing a WebView)
Electronic Frontier Foundation Developer 2014 - 2016 Hired to take EFF's campaigning to the next level by building an action centre in Ruby on Rails. The action centre is built around some large open source tools that lower the barrier to entry when contacting congress.
Earbits CTO 2013 - 2015 Started off as a front end developer but took on the role of CTO in early 2013. The application frontend is built with javascript and organized as a single page application that talks to a collection of Rails web servers which are connected to MongoDB.
JSON Resume Founder 2014 - Present JSON Resume is a community driven open source initiative to create a JSON based standard for resumes. There is no reason why there can't be a common standard for writing a resume that can be extended with an ecosystem of open source tools.
Taskforce.is Developer 2013 - 2016 Worked on many politically charged campaigns against mass surveillance. Not only technically challenging work but also a lot of networking and getting my hands dirty with politics. Our biggest project was "TheDayWeFightBack".
Drone Hire Co-Founder 2013 - Present An international directory of civilian drone / UAV operators for hire. Services include aerial photography, aerial video, mapping, surveying, precision agriculture, real estate photography, remote inspections and infrared imaging. Our plan is to be the place to go when looking for UAV/Drone services. The website is built in Backbone.js and API is built with Node.js and Postgres.
BackboneTutorials.com Founder 2011 - 2014 I write tutorials and blog post regarding the popular javascript framework Backbone.js. The tutorials cover a range of topics regarding front end development aimed at beginners, experts and anyone in between.
Ephox Front-end Developer 2011 - 2012 Ephox is a worldwide company who is heavily involved with the development of TinyMce and enterprise editors. My primary role included building front-end widgets and applications. Worked on a major product using Backbone.js as a base. Heavily involved in UI/UX design and wire-framing. Also spend a lot of time designing API specifications and documentation.

Projects

JSON Resume

JSON Resume is a community driven open source initiative to create a JSON based standard for resumes. There is no reason why there can't be a common standard for writing a resume that can be extended with an ecosystem of open source tools.

This resume is built with JSON Resume	Over 3000 stars on GitHub	Community developed themes	Tens of thousands of users
---------------------------------------	---------------------------	----------------------------	----------------------------

Cdnjs

Following Google's CDN for jQuery, we decided to start a CDN for the less popular javascript frameworks. The CDN is community moderated and open source on GitHub. We secured a partnership with Cloudflare who now supports the infrastructure.

Millions of sites use the CDN in production	Larger market share than Yahoo's, Microsoft's and Google's javascript content distribution networks	We serve hundreds of billions request a month	Contains over 3000 popular javascript libraries	Millions of developers visit the site per year
---	---	---	---	--

MobTranslate

Open-source Indigenous language dictionary platform supporting advanced search, real-time AI translation, and server-side rendering. Built with Next.js and Turborepo.

Implemented multilingual dictionary with advanced search and pagination	Added real-time translation API using AI techniques	Optimized performance with server-side rendering (Next.js)	Structured codebase as a monorepo using Turborepo.
